

The Hydrologic Status report has been updated:

8/29/2025

All the status indicators are NORMAL (green).

Precipitation: Over the past 90 days, 12.6 inches of rain fell over Bucks County, which is within the normal range. Over the past 365 days, 39.6 inches of precipitation fell, which is just within the normal range (the average is 50.1 inches). However, the annual total remains 9 inches below the normal. The recent spell of dry weather continues to influence future groundwater levels.

Groundwater: Is in the NORMAL status. Local groundwater level data is available through 8/4/2025. Local groundwater levels are at the lower-median average.

Streamflow: as determined by USGS data for Tohickon Creek, remains above NORMAL status.

The National Ground Water Association (NGWA) and WellOwner.org have announced that Protect Your Groundwater Day will be held on **September 3, 2025**.

This annual event raises awareness about the importance of proper maintenance and testing of water wells, encouraging nationwide participation in protecting groundwater. NGWA and the BNTGMC recommend that private water systems be inspected and tested annually by certified water well contractors to ensure they provide safe, healthy water.
